A Foundation for Programming

Arrays

This lecture Store and manipulate huge quantities of data

Array Indexed sequence of values of the same type

Examples

- 52 playing cards in a deck
- 10 thousand undergrads at Penn
- 1 million characters in a book
- 10 million audio samples in an MP3 file
- 4 billion nucleotides in a DNA strand
- 73 billion Google queries per year
- 50 trillion cells in the human body
- 6.02×10^{23} particles in a mole

index	value
0	hjbrown
1	hawk
2	spathare
3	anann
4	catheriz
5	ericlee
6	fannliu
7	lilleyia

3

Many Variables of the Same Type

Goal 10 variables of the same type

```
// tedious and error-prone
double a0, a1, a2, a3, a4, a5, a6, a7, a8, a9;
a0 = 0.0;
a1 = 0.0;
a2 = 0.0;
a3 = 0.0;
a4 = 0.0;
a5 = 0.0;
a6 = 0.0;
a7 = 0.0;
a8 = 0.0;
a9 = 0.0;
...
a4 = 3.0;
...
a8 = 8.0;
...
double x = a4 + a8;
```

4

Many Variables of the Same Type

Goal 10 variables of the same type

```
// easy alternative
double[] a = new double[10];
...
a[4] = 3.0;
...
a[8] = 8.0;
...
double x = a[4] + a[8];
```

declares, creates, and initializes
[stay tuned for details]

5

Many Variables of the Same Type

Goal 1 million variables of the same type

```
// scales to handle large arrays
double[] a = new double[1000000];
...
a[123456] = 3.0;
...
a[987654] = 8.0;
...
double x = a[123456] + a[987654];
```

declares, creates, and initializes
[stay tuned for details]

6

Arrays in Java

Java has special language support for arrays

- To make an array: declare, create, and initialize it
- To access entry i of array named a , use $a[i]$
- Array indices start at 0

```
int N = 10;           // size of array
double[] a;         // declare the array
a = new double[N];  // create the array
for (int i = 0; i < N; i++) // initialize the array
    a[i] = 0.0;     // all to 0.0
```

7

Arrays in Java

Java has special language support for arrays

- To make an array: declare, create, and initialize it
- To access entry i of array named a , use $a[i]$.
- Array indices start at 0

```
int N = 10;           // size of array
double[] a;         // declare the array
a = new double[N];  // create the array
for (int i = 0; i < N; i++) // initialize the array
    a[i] = 0.0;     // all to 0.0
```

Compact alternative

- Declare, create, and initialize in one statement
- Default initialization: all numbers automatically set to zero

```
int N = 10;           // size of array
double[] a = new double[N]; // declare, create, init
```

8

Vector Dot Product

Dot product Given two vectors $x[]$ and $y[]$ of length N , their dot product is the sum of the products of their corresponding components

```
double[] x = { 0.3, 0.6, 0.1 };
double[] y = { 0.5, 0.1, 0.4 };
int N = x.length;
double sum = 0.0;
for (int i = 0; i < N; i++) {
    sum = sum + x[i]*y[i];
}
```

i	$x[i]$	$y[i]$	$x[i]*y[i]$	sum
				0
0	.30	.50	.15	.15
1	.60	.10	.06	.21
2	.10	.40	.04	.25
				.25

9

Array-Processing Examples

<i>create an array with random values</i>	<pre>double[] a = new double[N]; for (int i = 0; i < N; i++) a[i] = Math.random();</pre>
<i>print the array values, one per line</i>	<pre>for (int i = 0; i < N; i++) System.out.println(a[i]);</pre>
<i>find the maximum of the array values</i>	<pre>double max = Double.NEGATIVE_INFINITY; for (int i = 0; i < N; i++) if (a[i] > max) max = a[i];</pre>
<i>compute the average of the array values</i>	<pre>double sum = 0.0; for (int i = 0; i < N; i++) sum += a[i]; double average = sum / N;</pre>
<i>copy to another array</i>	<pre>double[] b = new double[N]; for (int i = 0; i < N; i++) b[i] = a[i];</pre>
<i>reverse the elements within an array</i>	<pre>for (int i = 0; i < N/2; i++) { double temp = b[i]; b[i] = b[N-1-i]; b[N-1-i] = temp; }</pre>

10

Shuffling a Deck

Setting Array Values at Compile Time

Ex. Print a random card

```
String[] rank = {
    "2", "3", "4", "5", "6", "7", "8", "9",
    "10", "Jack", "Queen", "King", "Ace"
};

String[] suit = {
    "Clubs", "Diamonds", "Hearts", "Spades"
};

int i = (int) (Math.random() * 13); // between 0 and 12
int j = (int) (Math.random() * 4); // between 0 and 3

System.out.println(rank[i] + " of " + suit[j]);
```

11

Setting Array Values at Run Time

Ex. Create a deck of playing cards and print them out

```
String[] deck = new String[52];
for (int i = 0; i < 13; i++)
    for (int j = 0; j < 4; j++)
        deck[4*i + j] = rank[i] + " of " + suit[j];

for (int i = 0; i < 52; i++)
    System.out.println(deck[i]);
```

Typical array-processing code changes values at runtime

Q. In what order does it output them?

- A. two of clubs
two of diamonds
two of hearts
two of spades
three of clubs
...
- B. two of clubs
three of clubs
four of clubs
five of clubs
six of clubs
...

13

Shuffling

Goal Given an array, rearrange its elements in random order

Shuffling algorithm

- In iteration i , pick random card from $deck[i]$ through $deck[N-1]$, with each card equally likely
- Exchange it with $deck[i]$

```
int N = deck.length;
for (int i = 0; i < N; i++) {
    int r = i + (int) (Math.random() * (N-i));
    String t = deck[r];
    deck[r] = deck[i];
    deck[i] = t;
}
```

swap idiom between i and $N-1$

14

Shuffling a Deck of Cards: Putting Everything Together

```
public class Deck {
    public static void main(String[] args) {
        String[] suit = { "Clubs", "Diamonds", "Hearts", "Spades" };
        String[] rank = { "2", "3", "4", "5", "6", "7", "8", "9", "10", "Jack", "Queen", "King", "Ace" };

        int SUITS = suit.length;
        int RANKS = rank.length;
        int N = SUITS * RANKS;

        String[] deck = new String[N]; // build the deck
        for (int i = 0; i < RANKS; i++)
            for (int j = 0; j < SUITS; j++)
                deck[SUITS*i + j] = rank[i] + " of " + suit[j];

        for (int i = 0; i < N; i++) { // shuffle
            int r = i + (int) (Math.random() * (N-i));
            String t = deck[r];
            deck[r] = deck[i];
            deck[i] = t;
        }

        for (int i = 0; i < N; i++) // print shuffled deck
            System.out.println(deck[i]);
    }
}
```

avoid "hardwired" constants

15

Shuffling a Deck of Cards

```
% java Deck
5 of Clubs
Jack of Hearts
9 of Spades
10 of Spades
9 of Clubs
7 of Spades
6 of Diamonds
7 of Hearts
7 of Clubs
4 of Spades
Queen of Diamonds
10 of Hearts
5 of Diamonds
Jack of Clubs
Ace of Hearts
...
5 of Spades
```

```
% java Deck
10 of Diamonds
King of Spades
2 of Spades
3 of Clubs
4 of Spades
Queen of Clubs
2 of Hearts
7 of Diamonds
6 of Spades
Queen of Spades
3 of Spades
Jack of Diamonds
6 of Diamonds
8 of Spades
9 of Diamonds
...
5 of Spades
```

Summary

Arrays

- Organized way to store huge quantities of data
- Almost as easy to use as primitive types
- Can directly access an element given its index

Ahead Reading in large quantities of data from a file into an array
